DETAILED ACTION

This Office action is in response to the communication filed 2-28-05.

Claims 24, 26-33, 41-50 and 52 are pending in the instant application.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Response to Arguments and Amendments

Withdrawn Rejections

Any rejections not repeated in this Office action are hereby withdrawn.

Maintained Rejections

Claims 24, 26-33, 41-50 and 52 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention, for the same reasons set forth in the Office action mailed 8-24-04.

Applicant's arguments filed 2-28-05 have been fully considered but they are not persuasive. Applicant argues that the claimed invention is adequately described with respect to the genus comprising *antigen determinants* because Applicant has provided a protein sequence, which specifically binds to polyclonal serum pooled from humans infected with virulent Mycobacteria TB. Applicant also argues that the specification teaches that the antigens identified as SEQ ID NO: 2 can be further used to determine

Art Unit: 1635

which segments are recognized by Mycobacterium tuberculosis specific T-cells.

Contrary to Applicant's assertions, the identification of SEQ ID NO: 2 as the polypeptide sequence that is antigenic to polyclonal serum pooled from humans infected with virulent Mycobacteria TB is not representative or correlative of the identification of the antigenic determinants reactive with patients' sera that are within the polypeptide sequence of SEQ ID NO: 2. Antigenic determinants are derived from a subset of this sequence, and may comprise as few as 4-5 contiguous amino acids, or alternatively may be derived from a subset of amino acids that are in close proximity due to higher order polypeptide structure or conformation (e.g. protein folding). No subsequences, fragments or peptide portions of SEQ ID NO: 2 have been identified as antigenic determinants. No description of the members of the genus of antigenic determinants (e.g. derived from the polypeptide SEQ ID NO: 2) has been provided. One of skill in the art would reasonably conclude that a representative number of species within the genus comprising antigenic determinants has not been adequately described. In addition, the teachings in the specification - that the antigens identified as SEQ ID NO: 2 can be further used to determine which segments are recognized by Mycobacterium tuberculosis specific T-cells – is an invitation for further experimentation, not an adequate description of what comprises the antigenic determinants. For these reasons, the written description rejection is maintained.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
